PASSIONATE ABOUT FRESHNESS

REFERENCE LETTER FROM NATURE WAY FOODS TO MIATECH'S BIO TURBO

To whom it may concern:

Nature's Way Foods is extremely pleased and satisfied with the purchase and installation of the three Bio Turbo 6000 and one Bio Turbo 1000 models from Miatech. Since we started using Bio Turbo system there has been a large reduction in ethylene levels which has brought the levels down to a level below our target. These targets were determined by the type of product stored in each room and their sensitivity to ethylene.

Nature's Way Foods is a leading importer and distributor of fresh fruits and ready to eat fruits in the UK. Our products have a high value and we need to maintain the quality of our raw material during storage.

The Bio Turbo models installed by Miatech in March 2012 have been an invaluable addition to our operations. We have noticed that the ethylene level normally present in our cold room was minimized once Bio Turbo was in operation. We are pleased with the efficiency of Bio Turbo and we appreciate the results we have had so far. We found we made a very reliable investment with Miatech solution and we would like to recommend Miatech's Bio Turbo system to any other company facing the same issues during the storage of high value perishable products.

Sincerely

Kirsty Connelly
Process Technologist
